

**Chlorine-Free & Salt-Free Spa and Pool Products,  
that treat you as well as your pool and spa**

**DIRECTIONS TO CHANGE OVER TO ENVIRO SPA SYSTEM  
FOR SPAS WHICH HAVE RUN ON OTHER SYSTEMS.**

These instructions can be followed if wishing to clean out spa or dump water.

- **Stop dosing with all other products.**
- Check Chlorine/Bromine has a nil reading, do this with your test kit .
- Shock dose the spa with 80grms of Enviro Booster Powder.
- Filter and run the blowers to clear pipe work over a period of 2 hrs with the cover off the spa.
- Note: After adding the shock, the water may turn a dirty cloudy or foam. This is normal and the water will clear over the following 2 hrs.
- Remove the filter element and clean thoroughly with a filter cleaning product.

Suggest strongly to dump the water. If the water is clear and not wishing to dump then check pH before proceeding to dose. Must be 7.2 – 7.8

If reading is higher than 7.8 do nothing as spa is ok to dose, but check the PH level the next day, as sometimes it may take 24hrs to settle. If pH level is still high dose with an extra 10grms of Enviro Booster Powder.

Dose with BioBlu, Enviro Spa Clarifier and Enviro Spa Booster Powder as per instructions below. Run filter and can use spa 1 hour later.

1. Dose with 10ml Bio Blu,
  - i. 10ml Enviro Clarifier
  - ii. 10grms Enviro Booster or the correct dose for your spa size.

**Heavy Use : 3 OR MORE IN SPA MORE THAN ONCE A WEEK**

It is recommended to do a 20 gm mid week dose of Enviro Booster  
When the spa is given the extra dose run the filter and clean if necessary.

If Spa is cloudy can give a extra 20gram dose of Enviro Booster powder run filter, and thoroughly clean filter.

When dosing with extra Enviro Booster check pH and rise with Enviro Cleaning Product if below 7.6.

Ring or email Enviro to check if you are unsure. Helen: 0434010346
